National dental network for you Aetna Dental® Administrators

Dental care is an important part of your well-being

Dental insurance helps you to reduce costs for routine dental care and unexpected dental expenses.

You generally pay less for services when you visit in-network dentists because the percentages you pay for the care you receive are based on discounted rates.

Participating dentists may also offer negotiated rates on additional services such as tooth whitening.*

All offices are taking new patients

The Aetna Dental Administrators program includes a network of dentists that are located all over the country, so it's likely you'll be able to find participating dentists no matter where you live.

A broad dental network to help save you money

The Aetna Dental Administrators program has a large network of dentists. Today, there are nearly 238,000 dental practice locations in the network[1].

Network includes general dentists and specialists

You can check the availability of a general dentist or specialist in your area by accessing the provider network online. The directory is updated regularly.

Dentists are screened to meet network requirements

Before acceptance into the Aetna Dental Administrators program, prospective dentists must successfully complete a credentialing process. They are credentialed in accordance with state law requirements.

Finding a dentist near you is easy.
