

Managing Chronic Conditions

Base versus Extended program offerings

Population Health Management from EVHC helps members manage chronic conditions by encouraging better behavior choices and building healthier habits. Using advanced analytics tools, we identify members with chronic conditions and provide proactive outreach through various health coaching models – ultimately saving members, and their employers, money.

What conditions does Population Health Management monitor?

Population Health Management offers two program levels – base and extended. The six chronic conditions that are monitored under the base program have been recognized as major cost drivers for medical spend. When employers choose the extended program, they introduce monitoring for an additional 13 conditions.

	Base	Extended
Chronic kidney disease	Check	Check
Chronic obstructive pulmonary disease (COPD)	Check	Check
Congestive heart failure	Check	Check
Coronary artery disease	Check	Check
